CAREER OBJECTIVE

Passionate and dedicated Junior MERN Stack Web Developer skilled in building responsive full-stack web applications. Strong in frontend and backend development using React.js, Node.js, Express, and MongoDB. Experienced in crafting engaging UI/UX designs, collaborating in team environments, and solving real-world problems. Eager to contribute to dynamic teams and build scalable web solutions.

WORKING AND LEARNING EXPERIENCE

I began my professional journey in 2020 as an Outbound Sales Representative at Dial International, where I developed strong communication and persuasion skills. After six months, I joined IF Logics in a similar sales role, further building my expertise in client engagement and customer handling. Over the next few years, I worked at several organizations, including Hello There, consistently delivering results in fast-paced, high-pressure environments. In mid-2023, I transitioned from sales to pursue my passion for technology by enrolling in a Diploma in Information Technology, which I successfully completed in 2025 with strong academic performance. During my studies, I also worked remotely as a Web and Mobile UI/UX Designer, contributing to multiple real-world projects and enhancing my frontend development and design skills. My academic journey was marked by notable achievements, including securing 3rd position in a national-level competition, earning a distinction in one of my major e-projects, and presenting my final-year project at the First Vision Tech Exhibition. Alongside my core studies, I proactively learned additional technologies such as Angular, jQuery, PHP, MySQL, ASP.NET, C#, Flutter, Dart, and Firebase. This diverse background in sales, design, and software development has equipped me with a versatile skill set and the adaptability to thrive in dynamic web and software development roles.

TECHNICAL SKILLS

WEB DEVELOPMENT | REACT-JS , NODE AND EXPRESS , CSS FRAMEWORKS , CSS PREPROCESSOR , HTML - CSS - JS - JQUERY - STATE MANAGEMENT

DATABASE | NOsQL , SQL , SQL SERVER , MYSQL , MONGODB , DATABASE MANAGEMENT

WEB PROJECTS

MyBindle - https://workforuse.github.io/MyBindle/
A fully responsive static web application built using React.js and Tailwind CSS.

DeehTee Blog App - https://workforuse.github.io/DeehTee
A blog posting web app utilizing React Context API for state management.
